## DETAILED ACTION

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 8, drawn to a pneumatic radial tire including the subject matter of claim 1 and a bias insert of organic fiber cords in the sidewalls, classified in class 152, subclass 527.
  - II. Claims 9 and 10, drawn to a pneumatic radial tire including the subject matter of claim 1 and a circumferential insert of organic fiber cords in the sidewalls, classified in class 152, subclass 527.
  - III. Claims 11 and 12, drawn to a pneumatic radial tire including the subject matter of claim 1 and both the bias insert and the circumferential insert in the sidewalls, classified in class 152, subclass 527.
  - IV. Claims 1-7, drawn to the subject matter of claim 1 linking Inventions I-III, classified in class 152, subclass 527. Claims 1-7 will therefore be examined with whichever invention among Inventions I-III is elected by applicant.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are distinct inventions characterized by different subcombinations of features: Invention I does not require the circumferential insert in the sidewalls of Invention II, and Invention II does not require the bias insert in the sidewalls of Invention I.
- 3. Inventions III and I-II are related as distinct inventions characterized by a combination of features and a subcombination of features. Inventions in this relationship are distinct if it can be shown that the invention characterized by the combination of features as claimed does not require the particulars of the invention characterized by the subcombination of features as

Application/Control Number: 09/911,720
Art Unit: 1733

claimed for patentability. In the instant case, the invention characterized by the combination of features as claimed does not require the particulars of the invention characterized by the subcombination of features as claimed because there is evidence (claim 8 requiring one subcombination and claim 9 requiring the other subcombination) that neither subcombination of features is the sole basis for patentability of the invention characterized by the combination of features.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Each of the two subcombinations of features form a separate inventive effort in the tire art, as evidenced by European Patent Application 0 301 093 A1 cited by applicant (bias insert without circumferential insert) and applicant's own US Patent 6,543,502 B2 (circumferential insert without bias insert) for example, and therefore each subcombination has a separate status in the art as per MPEP 808.02. Of course, once allowable subject matter has been identified rejoinder of any nonelected invention incorporating the allowable subject matter will be considered.

5. Claims 1-7 link(s) inventions I-III. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claims 1-7. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application.

Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to

Application/Control Number: 09/911,720
Art Unit: 1733

provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adrienne C. Johnstone whose telephone number is (703)308-2059. The examiner can normally be reached on Monday-Friday, 10:00AM-6:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Ball can be reached on (703)308-2058. The fax phone numbers for the organization where this application or proceeding is assigned are (703)872-9311 for regular communications and (703)872-9310 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0661.
